Dr. Chenming Hu
TSMC Distinguished Chair Professor of Microelectronics
University of California at Berkeley
Department of Electrical Engineering and Computer Sciences
502 Cory Hall #1770
Berkeley, CA 94720-1770

Dear Dr. Hu:

On behalf of the Semiconductor Industry Association and the Semiconductor Research Corporation, it is our pleasure and honor to present you with the 2011 SIA University Research Award. This award is given to university researchers who demonstrate exemplary research and who have made significant contributions to the semiconductor industry.

The SIA University Research Award underscores our belief that there isn't just one leader, one company, or even one innovator that takes ownership for the success of this industry, but rather it is the collective efforts of an entire community that has come to be inspired by our vision and has taken up our call to action. We have found such a visionary in you, your research and your contributions to the advancement of semiconductor innovation.

Through your leadership—within the industry, at the University of California at Berkeley, and across the community—you have sought to improve the innovation and advancement of the electronics industry and of our national economy. We thank you for your service and hope that you will continue to inspire tomorrow's innovators through your work.

Kind Regards,

Brian C. Toohey
President
Semiconductor Industry Association

Larry Sumney
President and CEO
Semiconductor Research Corporation
